FOR IMMEDIATE RELEASE: December 19, 2023

Foresight Announces Generative AI Helper
Accelerate and de-risk major capital projects with AI

London, UK: Foresight, developer of the leading AI-enabled platform for helping owners and contractors complete major construction projects on time and on budget, is excited to announce the release of "**Casey**", our new generative AI based helper. Casey is an easy to use and secure approach to creating guidance for proactive project execution.

When we first launched Foresight in 2022, we revolutionized the way project managers, controllers and planners work, by applying AI to identify priorities, risks, and action plans in construction schedules imported from Oracle Primavera P6 or Microsoft Project.

Now, with one-click on any task in your schedule, Casey produces suggestions on what actions need to be taken to complete a project on time. Whether addressing an upcoming bottleneck, creating a lookahead action plan to complete a milestone, or other suggestion, Casey gives you powerful guidance in seconds. These suggestions can be edited (or rejected), and then easily shared with the relevant team members.

"As a pioneer in applying AI, machine learning and natural language processing to major construction project schedules, we are proud to launch our next AI capability", said Igor Shifrin, Chief Executive Officer at Foresight. "Casey brings your schedule data alive and powers intelligent workflows."

Additionally, your data stays within Foresights's cyber security perimeter as Casey is powered by models hosted on our private servers -- leveraging the complete benefits of our security posture, as evidenced by our ISO 27001, Cyber Essentials Plus and other accreditations.

About Foresight
Foresight's construction project management platform helps owners and contractors deliver major projects on-time and on-budget by automatically identifying priorities, risks, and action plans in Primavera P6 or Microsoft Project schedules. We place the schedule at the heart of project execution, enabling project managers, controllers and schedulers to make data-driven decisions. Leveraging AI, machine learning and natural language processing, Foresight unleashes predictive insights about delay risks and work prioritization. Our secure, scalable and user-friendly platform revolutionizes your planning and execution by creating proactive 'look-ahead' action plans, igniting dynamic collaboration, staying head of risks, learning from past projects, and enhancing schedule visibility/reporting.
